The Design Story Levado™ Height Adjustable Desk

How can one design offer three solutions? This was the driving question for the Fellowes Horizon Team as they set out to create a remarkably different height adjustable desk, that would offer more functionality through design than any competitor.

Unfolding Performance

The team focused on creating a leg base that assembled with dynamic folding mechanisms, that quickly and easily snapped into place with precision and stability. The SwiftLok™ design turned setup into an effortless

performance of functionality. An elegant design that forever ended the need for tools and trained installers.

Agile Transformation

The concept of an interchangeable desktop was something new to height adjustable desks, yet had to be just as effortless as the leg base. With the development of VersaTop Clamps™, the team enabled any user to change their desktop design as they wished. With the simple fastening system, the graceful design opened up the opportunity for a variety of distinctive finishes. One could easily transform their desk with the changing office décor.

Control by Intuition

Starting with the idea that adjusting desk height should be simply intuitive, the team also wanted it to be enjoyable to use. They continued to refine the responsive touch control module until perfected. Soft to the touch

and simple to use, the Feather Lift™ control paddle, with four programmable memory settings, gives you personalisation at your fingertips.

“ adjusting desk height should be simply intuitive ”

A Height Adjustable Desk Design... Elevated

The result is the Levado, a singular superior height adjustable desk design that provides three solutions. Fast and secure assembly. Quick and easy customisable tops. Precise control by touch.

Why stand for anything less?
