6. Access panel latch
7. Access panel lock
8. Rear housing assembly
9. Control panel
10. Filter frame window

SAFETY

WARNING: To avoid the risk of electrocution confirm the electrical supply has been disconnected or switched off before beginning any installation work.

Confirm no electrical wiring, utility pipes, or duct work is located directly behind the installation / drilling area.

On a stud wall, it is strongly recommended at least 2 mounting anchors for the air purifier be mounted to an existing stud.

- The unit should be installed with a residual current protective devices (RCDs) with a rated residual operating current not exceeding 30 mA.
- When near a bath or a shower, the unit should be installed within the standard of Zone 2 or further.

TOOLS REQUIRED FOR INSTALLATION

- Electric drill, drill bits (not included)
- # 2 Phillips and # 2 Flat Head screw drivers (not included)
- Wire nuts (not included)
- Level (not included)
- Mounting template (included)

PARTS PROVIDED FOR INSTALLATION

- Drywall Anchors - 10mm OD
- Pan Head Phillips Screws

PRODUCT INSTALLATION GUIDELINES

Place the mounting template provided on the wall where the air purifier is to be installed. If air purifier is being mounted high on the wall make sure the top edge of the unit is positioned at least 8" inches (21 cm) below the ceiling to allow for filter replacement (see Fig 2).

Fig 2

MOUNTING REAR HOUSING AND MAIN ASSEMBLY

Test the electrical outlet box first to ensure rated power requirements are met before beginning installation.

Remove air purifier from its shipping carton and remove all packing material.

Fig 3

Place the air purifier face up on a flat, stable work surface. Open the access panel by pressing in latches on each side of the unit (Fig 3).

Fig 4

Open access panel and remove filter assembly by pulling out on top of side edges of frame, then lifting. NOTE: remove all plastic wrap from filters (Fig 4).

Fig 5

Fig 6

Remove the six housing screws (Fig 5 & 6) and set aside for re-assembly.

Fig 7

Fig 8

At the location of the two upper housing corner screws (Fig 5), insert a flat head screwdriver and gently twist to release tab as shown in Fig 7. This will disconnect main housing assembly from the rear housing assembly.

Disconnect main housing assembly from rear housing assembly. Separate main housing from rear housing. Lift main housing assembly away from rear mounting housing (Fig 8).

REAR HOUSING INSTALLATION & WIRING

Reference rear housing and locate desired mounting location. Again, it is strongly recommended at least 2 mounting anchors for the air purifier be mounted to an existing stud.

Fig 9

Using provided template ensure electrical outlet box is located behind cable hole (A) in Rear Housing assembly (Fig 9). Drill holes and place anchors in wall. If mounting on concrete, cinder block or brick type walls route the wires through the "punch-out" hole marked (B) in Fig 9.

Fig 10

Check for washers at all mounting screw locations (Fig 10). Pull wires from electrical outlet box through hole in rear housing. Align housing over anchors and securely install all mounting screws.

Fig 11

Attach wires from electrical outlet box to wires located inside rear housing using wire nuts. Match up line (black) and neutral (white) wires (Fig 11). Make sure all connections are made in accordance with federal, state and local codes and regulations.

MAIN ASSEMBLY INSTALLATION

WARNING: To avoid the risk of electrocution confirm the electrical supply has been disconnected or switched off before continuing any installation work.

The power connector (B, in Fig 12) will carry power from the rear housing to the main housing once the assemblies are fully seated. The main assembly will attach to the rear housing assembly by the four screws previously removed (Fig 5 & 6). Two snap hooks (A, in Fig 12) will hold the main and rear assemblies together until the screws can be installed.

Carefully align the main assembly with the rear housing assembly. Slowly press into place until snap is heard, and there is no gap between the assemblies (Fig 13). The unit should now support its own weight.

Install six screws (previously removed) to secure main assembly to rear housing assembly (Fig 14 & 15).

RE-INSTALLING FILTERS

IMPORTANT: Make sure all plastic wrap is removed from filters.

Make sure filters are in correct order - pre-filter / carbon filter / HEPA filter - and inserted into filter frame (Fig 16).

IMPORTANT: Make sure filter detection area aligns with window in filter frame (Fig 17).

Open front panel by pressing latches on both sides of unit. Allow door to open fully. Insert filters – **IMPORTANT:** make sure filter detection window is aligned in upper right corner (Fig 18).

Close front panel by pressing firmly until both sides latch closed (Fig 19).

Once the unit is closed re-establish power. Lights on the control panel will be visible through the lens, indicating the unit is operational (Fig 20). The power light indicator will flash once a second.

LOCKING ACCESS PANEL

To restrict access to the control panel and filters the unit can be locked. To lock, insert the key provided and rotate clockwise $\frac{1}{4}$ turn (Fig 21).

SAFETY INSTRUCTIONS/WARNING

Thank you for purchasing the AeraMax® PRO AM IV.
Please read and save these instructions. Read carefully before attempting to assemble, install, operate or maintain this product. Protect yourself and others by observing all safety information. Failure to comply with instructions could result in personal injury and/or property damage. Retain instructions for future reference.

IMPORTANT CAUTIONS AND INSTRUCTIONS FOR USING AIR PURIFIER:

WARNING: Follow the instructions in this manual to reduce the risk of electric shock, short circuit, and/or fire:

- Do not use this air purifier as sole protection against harmful pollutants.
- Use this unit only in the manner intended by the manufacturer. If you have questions, contact the manufacturer.
- Installation work and electrical wiring must be done by qualified person(s). All electrical installation work must be conducted and carried out in accordance with all federal, state and local codes and regulations.
- Before servicing or cleaning the unit, switch power off at service panel. Lock service panel, or affix a warning tag, to prevent power from being switched back on accidentally.
- The AeraMax® PRO air quality control system must be grounded.
- Use only the electrical power (voltage and frequency) specified for the model air purifier being installed.
- Do not obstruct the air inlet or air outlet of the air purifier.
- When drilling into mounting surface, do not damage electrical wiring and other hidden utilities.
- Do not use unit without filters installed.
- Do not wash and reuse any of the filters.
- Do not use attachments or filters other than AeraMax® PRO brand, as unit will not function.
- Do not spray aerosols on, or into the unit.
- Do not use detergent to clean the unit.
- Do not insert fingers, liquids, or foreign objects into the air intake or outlet.
- Do not use the unit for anything other than air purification.

LIMITED PRODUCT WARRANTY

Limited Warranty: Fellowes, Inc. ("Fellowes") warrants the AeraMax® PRO air quality control system (the "Product") to be free of defects in material and workmanship for the time periods as set forth below.

- For PC units only: The particle counters and display screen for a period of three (3) years from the date of original purchase of the Product.
- For standard and PC units: All other parts for a period of five (5) years from the date of original purchase of the Product.

In the event that the Product is installed into new construction, the warranty period shall commence on the date of the occupancy permit or one year after the date of purchase, whichever is earlier. If any part is found to be defective during the warranty period, your sole and exclusive remedy will be repair or replacement, at Fellowes' option and expense, of the defective part. This warranty does not cover damage caused by use of non-Fellowes approved filters or failure to follow the recommended replacement schedule. This warranty does not apply in cases of abuse, mishandling, failure to comply with product usage standards, operation using an improper power supply (other than listed on the label), or unauthorized repair. Fellowes reserves the right to charge the consumers for any additional costs incurred by Fellowes to provide parts or services outside of the country where the Product was initially sold by an authorized reseller. This warranty does not cover replaceable filters. In the event that the Product is not readily accessible to Fellowes designated service personnel, Fellowes reserves the right to supply customer with replacement parts or Product in full satisfaction of its obligations under this warranty and any service obligations. ANY IMPLIED WARRANTY, INCLUDING THAT OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, IS HEREBY LIMITED IN DURATION TO THE APPROPRIATE WARRANTY PERIOD SET FORTH ABOVE. In no event shall Fellowes be liable for any consequential, incidental, indirect or special damages. This warranty gives you specific legal rights. The duration, terms, and conditions of this warranty are valid worldwide, except where different limitations, restrictions, or conditions may be required by local laws.

PACKAGING CONTENTS

- AeraMax® PRO Air Quality Control System
- True HEPA Filter with AeraSafe™ Antimicrobial Treatment (2 filters)
- Activated Carbon Filter w/Pre-Filter (2 of each filter)
- Keys for Locking Front Panel (2)
- Mounting Template
- Pan Head Phillips Screws - M6 x 50mm (4)
- Drywall Anchors - 10mm OD (4)
- Registration information

PRODUCT SPECIFICATIONS

AeraMax® PRO AM IV	
Dimensions (H x W x D)	19.6 x 34.7 x 9 inches / 49.7 x 88.1 x 22.8 cm
Weight of System (including filters)	33.3 lbs. / 15.1 kg
Power Requirements	120V, 60Hz, 2A
Power Consumption (5 fan speeds)	8, 12, 18, 35, 166 watt
Air Delivery (5 fan speeds)	153, 186, 224, 280, 440 CFM
Decibels	42, 44, 51, 53, 68 dB
Display	Capacitive Touch, Internal Access Only
Sensors	EnviroSmart™
Sensor Controlled Operation Modes	2 Primary modes - Normal Mode and Quiet Mode
Supplied Filters	2 True HEPA Filters with AeraSafe™ Antimicrobial Treatment with an estimated average filter life of 1 year, 2 Activated Carbon Filters with Pre-Filter, estimated average filter life 6 months.
Cleaning System	High Efficiency Particulate Air (HEPA) filter rated efficiency of 99.97% of airborne particulate at 0.3 microns. Carbon Filter adsorbs odor and volatile organic compounds, PlasmaTRUE™ bipolar ionizer.
Color	• Stainless (Item# 9416301), • White (Item# 9446201), • Graphite (Item #9446301), • Custom finish available, call for more details

REPLACEMENT FILTERS

HEPA	True HEPA filter replacement with AeraSafe™ treatment. Average filter life 2 years: 9416601 – 2 pack
Carbon	Granular activated carbon replacement filter with pre-filter. Average filter life 6 months: 9416501 – 4 pack

For additional replacement filter and accessory information please visit: www.aeramaxpro.com

INFORMATION TO THE USER

This equipment has been tested and found to comply with the limits for Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in an installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment on a circuit different from that to which the receiver is connected.
- Consult the dealer or experienced radio/TV technician for help.

WARNING: Any changes or modifications not expressly approved by the manufacturer could void the user's authority to operate the equipment and warranty.

DISPLAY PANEL AM4 PC

NOTE: after the unit is turned on the “AQ” light will flash for a few minutes while the system self-calibrates.

- 1

HEPA FILTER REPLACEMENT INDICATOR — This indicator will show its status when the access panel is open or closed. If the light is red this indicates the filter needs replacing. The replacement period will vary depending on the filters used, hours of use, air quality, and rate of air flow. For filter replacement indicator descriptions see *FILTER REPLACEMENT INDICATORS* section.
- 2

CARBON FILTER REPLACEMENT INDICATOR — This indicator will show its status when the access panel is open or closed. If the light is red this indicates the filter needs replacing. The replacement period will vary depending on the filters used, hours of use, air quality, and rate of air flow. For filter replacement indicator descriptions see *FILTER REPLACEMENT INDICATORS* section.
- 3

ACCESSORY INDICATOR — This indicator will show its status when the access panel is open or closed. This indicator will only be used if an accessory filter is installed in the unit. If the light is red this indicates the filter needs replacing. The replacement period will vary depending on the filters used, hours of use, air quality, and rate of air flow. For filter replacement indicator descriptions see *FILTER REPLACEMENT INDICATORS* section.
- 4

AIR QUALITY SENSOR — This indicator will show its status when the access panel is open or closed. This indicator monitors the air quality and adjusts the fan speed to keep your air purified. Blue, amber, and red lights indicate the purity of your air.
- 5

PlasmaTRUE™ TECHNOLOGY — This indicator will show its status when the access panel is open or closed. Creates an ionized field to help safely remove airborne pollutants. To turn on and off the PlasmaTRUE™ TECHNOLOGY, touch and hold the PLASMA indicator. A blue light illuminates when the PlasmaTRUE™ TECHNOLOGY is enabled. To disable the PlasmaTRUE™ TECHNOLOGY, press and hold “Plasma” indicator until light is off.
- 6

AUTO MODE — To select, press and hold the button until the icon illuminates. This mode uses the EnviroSmart™ technology to monitor the air quality, motion and noise level to adjust the fan speed in order to purify your air as quickly as possible. This button also includes QUIET MODE. To select, press and hold until the button turns green. The machine will continue to use EnviroSmart™ but only utilizes the 3 lowest, most quiet of the 5 fan speeds.
- 7

MANUAL MODE — To select, press the button until the icon illuminates. This mode allows you to choose one of the 5 fan speeds and keep the unit at this speed until AUTO MODE is chosen again. The internal sensors will not adjust the fan speed in this mode.
- 8

FAN SPEED INDICATORS — The fan has 5 speeds and can reach turbo speed to clean the room in case of high levels of contaminants. The number of bars illuminated indicates fan speed.

1 — whisper

4 — high

2 — low

5 — turbo

3 — medium

OPERATION

The air purifier continuously works in automatic mode; the user can select which preference they would like the purifier to use based on the location or desired operation of the air purifier. The purifier will operate through a minimized range of speeds, not exceeding the maximum level selected, in order to run quietly while cleaning the room of contaminants. Once air is cleaned, and no sensors are activated, the unit lowers to energy saving mode to reduce energy consumption and extend the life of the filters.

When Auto Mode is selected, the Auto mode indicator will be blue. This mode uses the EnviroSmart™ technology to monitor the air quality, motion and noise level to adjust the fan speed in order purify your air as quickly as possible. Once air is cleaned, and no sensors are activated, the unit lowers to energy saving mode to reduce energy consumption and extend the life of the filters.

When Quiet Mode is selected, the Auto Mode indicator will be green. The machine will continue to use EnviroSmart™ but only utilizes the 3 lowest, most quiet of the 5 fan speeds.

When Manual Mode is selected, the Manual mode indicator will be blue. This mode allows you to choose one of the 5 fan speeds and keep unit at this speed until Auto Mode is chosen/selected. EnviroSmart™ sensors will NOT adjust the fan speed in this mode.

DISPLAY PANEL AMIV

NOTE: after the unit is turned on the “AQ” light will flash for a few minutes while the system self-calibrates.

- 1

HEPA FILTER REPLACEMENT INDICATOR — This indicator will show its status when the access panel is open or closed. If the light is red this indicates the filter needs replacing. The replacement period will vary depending on the filters used, hours of use, air quality, and rate of air flow. For filter replacement indicator descriptions see *FILTER REPLACEMENT INDICATORS* section.
- 2

CARBON FILTER REPLACEMENT INDICATOR — This indicator will show its status when the access panel is open or closed. If the light is red this indicates the filter needs replacing. The replacement period will vary depending on the filters used, hours of use, air quality, and rate of air flow. For filter replacement indicator descriptions see *FILTER REPLACEMENT INDICATORS* section.
- 3

ACCESSORY INDICATOR — This indicator will show its status when the access panel is open or closed. This indicator will only be used if an accessory filter is installed in the unit. If the light is red this indicates the filter needs replacing. The replacement period will vary depending on the filters used, hours of use, air quality, and rate of air flow. For filter replacement indicator descriptions see *FILTER REPLACEMENT INDICATORS* section.
- 4

AIR QUALITY SENSOR — This indicator will show its status when the access panel is open or closed. This indicator monitors the air quality and adjusts the fan speed to keep your air purified. Blue, amber, and red lights indicate the purity of your air.
- 5

PlasmaTRUE™ TECHNOLOGY — This indicator will show its status when the access panel is open or closed. Creates an ionized field to help safely remove airborne pollutants. To turn on and off the PlasmaTRUE™ TECHNOLOGY, touch and hold the PLASMA indicator. A blue light illuminates when the PlasmaTRUE™ TECHNOLOGY is enabled. To disable the PlasmaTRUE™ TECHNOLOGY, press and hold “Plasma” indicator until light is off.
- 6

NORMAL MODE — Select this mode for restrooms, cafeterias, fitness areas, and other louder areas as rapid purification is initiated when the room is occupied and/or strong airborne contaminants are present. To select, press and hold the “Normal” indicator until icon illuminates. This mode monitors air quality, motion, and noise level to adjust the fan speed in order to keep your air purified as quickly as possible. The fan can reach turbo speed to clean the room in the case of high levels of contaminant.
- 7

QUIET MODE — This mode utilizes the 3 lowest, most quiet of the 5 fan speeds. Select this mode for classrooms, meeting rooms, offices, and other quieter areas as the unit will not run faster than the maximum set speed. To select, press and hold the “Quiet” indicator until icon illuminates. Continue to press and hold the indicator to switch between the maximum speeds in this mode. There are three different levels; each level represents a maximum fan speed that the unit can achieve.
 - Level 1 = The lowest speed, the unit will beep one time when this mode has been selected and the unit will not run faster than this lowest speed.
 - Level 2 = Low speed, the unit will beep two times when this mode has been selected and the unit will not run faster than low speed.
 - Level 3 = Medium speed, the unit will beep three times when this mode has been selected and the unit will not run faster than medium speed.The Quiet Mode monitors air quality, motion, and noise level to adjust the fan speed in order to keep the air purified as efficiently as possible while not exceeding the maximum speed level selected.

OPERATION

The air purifier continuously works in automatic mode; the user can select which preference they would like the purifier to use based on the location or desired operation of the air purifier. The purifier will operate through a minimized range of speeds, not exceeding the maximum level selected, in order to run quietly while cleaning the room of contaminants. Once air is cleaned, and no sensors are activated, the unit lowers to energy saving mode to reduce energy consumption and extend the life of the filters.

When Normal mode is selected the Normal indicator on the control panel will be blue when the access panel is open. The purifier will operate through its full range of speeds in order to clean the room of contaminates as quickly as possible. Once air is cleaned, and no sensors are activated, the unit lowers to energy saving mode to reduce energy consumption and extend the life of the filters.

When Quiet mode is selected the Quiet indicator on the control panel will be blue when the access panel is open. The purifier will operate through a minimized range of speeds in order to stay as quiet as possible while cleaning the room of contaminates. Once air is cleaned, and no sensors are activated, the unit lowers to energy saving mode to reduce energy consumption and extend the life of the filters.

CARE AND MAINTENANCE

CLEANING:

- Clean external housing as necessary by wiping with a dry, soft cloth; for stains, use a warm, damp cloth.
- Do not use volatile fluids such as benzene, paint thinner, scouring powder or other cleaners that may damage the unit surface.
- Clean intake and exhaust vents by wiping with a dry, soft cloth.

FILTER REPLACEMENT INDICATORS:

The replacement filter indicators will signal when to replace the HEPA Filter and/or Carbon with Pre-Filter. The replacement period will vary depending on the hours of use, air quality, and rate of air flow. However, under normal usage, most HEPA Filters need to be replaced every 2 years, and Carbon with Pre-Filter every 6 months. When a filter needs to be replaced the following color will be shown on any one of the HEPA, CARBON, or ACCESSORY filter replacement indicators:

Red Flashing = RIGHT filter 90% full
Amber Flashing = LEFT filter 90% full
Red Flash, Pause, Amber Flash, Pause = Right & LEFT filters 90% full
Red = Replace RIGHT filter
Amber = Replace LEFT filter
Red & Amber Alternating = Replace Right & Left filters

Do not wash and reuse any of the filters – they will not work effectively. Only use AeraMax® PRO brand replacement filters as units will not function using any other replacements.

FILTER REPLACEMENT PROCEDURE:

Unlock access panel: to unlock, insert the key provided and rotate counter-clockwise ¼ turn.

Open front access panel by pressing latches on both sides of unit. Allow panel to open fully. Remove filter(s) to be replaced.

Remove any packaging wrap from the new filter(s) and re-install the filters.

FILTER REPLACEMENT:

When installing a new filter the unit will automatically detect the filter type but the user will have to manually reset the filter replacement indicators. To reset the flashing filter replacement indicator use the following procedure:

- 1 Touch and hold the illuminated indicator for three seconds until a beep is heard and the indicator is flashing green.
- 2 Release finger from indicator.
- 3 Touch and hold the indicator for three seconds until a beep is heard and the indicator light turns off.

Note: If you do not complete step three within 10 seconds of completing step 1 then the indicator light will not be reset.

TROUBLESHOOTING

PROBLEM:	POSSIBLE SOLUTION:
The air quality control system fails to start.	• Check to assure unit is connected to power supply. • Make sure filters are genuine AeraMax® PRO filters, as unit will not function with other brands. IMPORTANT: Make sure filter detection area on genuine AeraMax® PRO replacement filter aligns with window in filter frame. • Review "Re-Installing Filters" section for further detail. • Make sure front access panel is closed completely. • Make sure power switch is on.
The unit makes a faint ticking sound.	• This indicates that the "PlasmaTRUE™" bipolar ionizer is working.
The HEPA and/or Carbon Filter replacement indicator light remain lit after replacing the filter(s).	• Repeat filter light reset instruction.

CONSIGNES DE SÉCURITÉ/MISE EN GARDE

Merci pour votre achat de l'AeraMax® PRO AM IV.

Veuillez lire et conserver ces consignes. À lire attentivement avant toute tentative d'assemblage, d'installation, d'utilisation ou d'entretien de ce produit. Protégez-vous et autrui en respectant toutes les consignes de sécurité. Le non-respect de ces consignes pourrait entraîner des blessures corporelles et/ou des dégâts matériels. Conserver ces consignes pour pouvoir s'y référer ultérieurement.

IMPORTANTES MISES EN GARDE ET CONSIGNES CONCERNANT L'UTILISATION DU PURIFICATEUR D'AIR :

AVERTISSEMENT : suivre les instructions de ce manuel pour réduire le risque de choc électrique, de court circuit et/ou d'incendie :

- Ne pas utiliser ce purificateur d'air comme unique protection contre les polluants nocifs.
- Utiliser cette unité exclusivement de la façon prévue par le fabricant. Pour toute réponse aux éventuelles questions, contacter le fabricant.
- Les tâches d'installation et le câblage électrique doivent être effectués par des personnes qualifiées. Toute tâche d'installation électrique doit être effectuée et réalisée en accord avec tous les codes et réglementations gouvernementaux, provinciaux et locaux.
- Mettre l'unité hors tension à partir du panneau de commande avant tout entretien ou nettoyage. Verrouiller le panneau de commande ou apposer une étiquette d'avertissement, pour que personne ne remette l'unité sous tension par mégarde.
- Le système de contrôle de la qualité de l'air AeraMax® PRO doit être mis à la terre.
- Utiliser uniquement la puissance électrique (tension et fréquence) indiquée pour le modèle de purificateur d'air en cours d'installation.
- Ne pas obstruer l'entrée et la sortie d'air du purificateur d'air.
- Lorsque vous percez la surface de montage, veillez à ne pas endommager les fils électriques et tout autre équipement des services publics.
- Utiliser l'unité uniquement après avoir installé les filtres.
- Ne pas laver les filtres afin de les réutiliser.
- N'utiliser aucune pièce ni aucun filtre qui ne soit pas de marque AeraMax® PRO. Cela empêcherait l'unité de fonctionner.
- Ne pas vaporiser d'aérosol sur ou dans l'unité.
- Ne pas utiliser de détergent pour nettoyer l'unité.
- Veiller à ne pas insérer les doigts ni aucun liquide, ou corps étranger dans l'entrée d'air ou les événements.
- Ne pas utiliser l'unité, si ce n'est pour purifier l'air.

GARANTIE LIMITÉE DU PRODUIT

Garantie limitée : Fellowes, Inc. (« Fellowes ») garantit que le système de contrôle de la qualité de l'air AeraMax® PRO (le « Produit ») sera exempt de tout défaut de matériaux et de main d'œuvre pendant les périodes stipulées ci-dessous.

- Pour les appareils PC uniquement : Les compteurs de particules et l'écran d'affichage pour une période de trois (3) ans à compter de la date d'achat d'origine du produit.
- Pour les appareils standard et PC : Toutes les autres pièces pour une période de cinq (5) ans à compter de la date d'achat d'origine du produit.

Si le Produit est installé dans un bâtiment nouvellement construit, la période de garantie commencera au moment où le permis d'occuper sera émis ou un an après la date d'achat, selon la première éventualité. Si une pièce s'avère défectueuse durant la période de garantie, votre seul et unique recours sera la réparation ou le remplacement de la pièce à la discrétion et aux frais de Fellowes. Cette garantie ne couvre pas les dommages causés par l'utilisation de filtres non approuvés par Fellowes ou le non-respect du programme de remplacement recommandé. Cette garantie ne couvre pas les cas d'abus, de maintenance inadéquate, de non-conformité aux normes d'usage du produit, d'utilisation d'une source d'alimentation inappropriée (autre que celle indiquée sur l'étiquette) ou de réparation non autorisée. Fellowes se réserve le droit de facturer aux clients tous coûts supplémentaires encourus par Fellowes pour fournir des pièces ou des services à l'extérieur du pays où le produit a été vendu à l'origine par un revendeur autorisé. Cette garantie ne couvre pas les filtres remplaçables. Dans le cas où le Produit ne serait pas facilement accessible au personnel d'entretien désigné par Fellowes, Fellowes se réserve le droit de fournir au client des pièces de rechange ou un Produit afin de s'acquitter pleinement de ses obligations dans le cadre de la présente garantie et de toutes ses obligations en matière d'entretien. TOUTE GARANTIE IMPLICITE, Y COMPRIS CELLE DE QUALITÉ MARCHANDE OU D'ADAPTATION À UNE UTILISATION PARTICULIÈRE, SE LIMITE AUX PRÉSENTES À LA DURÉE DE LA PÉRIODE DE GARANTIE APPROPRIÉE ÉTABLIE DANS CE DOCUMENT. En aucun cas, Fellowes ne sera tenue responsable de quelque façon que ce soit de tout dommage direct ou indirect, accidentel ou non ou spécial attribuable à ce produit. Cette garantie vous donne des droits juridiques spécifiques. La durée, les modalités et les conditions de cette garantie s'appliquent partout dans le monde sauf dans les cas où différentes limites, restrictions ou conditions pourraient être exigées par la loi locale.

Luftrenser med partikeltællere
Til brug med maskinerne AM3 PC,
AM3S PC, AM4 PC & AM 4S PC

Légtisztító részecskeszámlálókkal
AM3 PC, AM3S PC, AM4 PC és AM 4S
PC berendezéssel való használatához

Ilmanpuhdistin, jossa on hiukkaslaskin
Käytettäväksi seuraavissa laitteissa:
AM3 PC, AM3S PC, AM4 PC & AM 4S PC

Purificador de ar com contadores
de partículas
Para utilizar com as máquinas AM3
PC, AM3S PC, AM4 PC e AM 4S PC

Thank you for purchasing the AeraMax[®] Professional with particle counters.
Please read and save these instructions.

This AeraMax[®] unit uses its advanced and patented EnviroSmart[™] 2.0 Technology to measure air particles and adjust the machine speed as needed. Unit utilizes particle counters, VOC, audio and motion sensors to effectively clean your environment.

TO CHANGE MODES or SCREENS

To access different air quality modes, push the top **MODE** button.

To change between the screens, push the bottom **PAGE** button.

MODE

Controls functionality within each **PAGE**

PAGE

Cycles Page

**2 Cap-Touch
Buttons**

Out

This number is the amount of air particles detected in the filtered air exiting the air purifier.

In

This number is the amount of air particles coming into the unit from the ambient air. These have not been directly filtered yet.

1. This screen displays a total snapshot of your room air quality.

The top section of the screen gives you a graphical representation of your current room air quality. The graphical display is based on the PM2.5 IN readings (from the PM2.5 screen) of the room's air that is entering the unit.

Room Air Quality:

If PM2.5 = 0 - 12 $\mu\text{g}/\text{m}^3$, it will display "CLEAN" inside of a blue graphic.

If PM2.5 = 12.1 - 35.4 $\mu\text{g}/\text{m}^3$, it will display "CLEANING" inside of a yellow graphic.

If PM2.5 = 35.5+ $\mu\text{g}/\text{m}^3$, it will display "CLEANING" inside of a red graphic.

The middle section of the screen displays the current cleaning efficiency which calculates the percentage reduction of PM2.5 particulate matter coming out of the purifier vs. PM2.5 particulate matter coming in. The PM2.5 readings refer to atmospheric particulate matter that have a diameter of 2.5 μm and smaller (example viruses, bacteria and smoke).

2. PM2.5 - Displays particle density ($\mu\text{g}/\text{m}^3$ or mass per volume) of particle sizes 2.5 μm and smaller (example viruses, bacteria and smoke). This air quality status displayed is related to the United States EPA's AQI (Air Quality Index). For more information, please visit <http://www.airnow.gov>.

If the particle reading is between 0 - 12, it displays a CLEAN measurement in blue.

If the particle reading is between 12.1 - 35.4, then it displays a FAIR measurement in yellow.

If the particle reading is 35.5+ or more, then it displays a POOR measurement in red.

3. PM10 - Displays particle density ($\mu\text{g}/\text{m}^3$ or mass per volume) of particles sizes 10 μm and smaller (for example pollen, dust, smoke, allergens and viruses). The air quality status displayed is related to the United States EPA's AQI (Air Quality Index). For more information, please visit <http://www.airnow.gov>.

If the particle reading is between 0 - 54, it displays a CLEAN measurement in blue.

If the particle reading is between 55 - 154, then it displays a FAIR measurement in yellow.

If the particle reading is 155+ or more, then it displays a POOR measurement in red.

ODOR/VOC

This measures the level of VOC's (volatile organic compounds) and odors coming into the unit from the ambient air. This has not been directly filtered yet. The machine adjusts its performance based on VOC's detected.

Blue - low level of VOC's detected

Yellow - medium level of VOC's detected

Red - high level of VOC's detected

CARBON ONLY FILTERS

It is NOT recommended to use carbon only filters with the AM3 PC, AM3S PC, AM4 PC, or AM4S PC units. Carbon filters do not capture particle sizes that can be detected by our sensors. In the case that a carbon only filter is used, the display changes to display VOC / ODOR LEVEL only. This will show the status similar to the VOC / ODOR bar with LOW / BLUE, MEDIUM / YELLOW, HIGH / RED. This screen automatically displays when the unit detects a carbon only filter, and cannot be selected.

FILTER INFORMATION

This screen contains the information needed to manage and reorder filters. The image(s) shown is the current filter inside the unit. AM3 will show 1 filter configuration while AM4 will show 2 filter configurations.

Life Remaining measures the estimated amount of life remaining in the HEPA and/or Carbon filter(s). AM3 will have 1 countdown while AM4 will have one for the left and right filters. To keep machine performing optimally, replace the filters once this percentage reaches 10% - 0% and the front screen flashes a "reorder filter" or "replace filter" alert.

See the Machine Manual to reset filters on the machine's user interface.

These alerts will automatically turn off once the filter is replaced/reset or you can turn this alert off at any time by pressing the MODE button to change FRONT PAGE NOTIFICATION to off. Once the new filters are replaced/reset, the life countdown will restart automatically.

These alerts will display for 5 seconds and replace the OUT readings once every 1 minute until reset or shut off.

Item number(s) are included to reorder replacement filter(s) on the website aeramaxpro.com.
If this page is left on with no activity, it will automatically return back to the main page after 5 minutes.

BRIGHTNESS

Push the MODE button while on this screen to increase/decrease the brightness of the display. If this page is left on with no activity, it will automatically return back to the main page after 1 minute.

GENERAL PAGE

If for any reason you'd like to have the screen on, but not display the particle or VOC readings, you can push the PAGE button to display the EnviroSmart 2.0 page.

SCREEN ON/OFF

TURN OFF SCREEN: If you would like to turn the screen off, push the PAGE button until the screen appears. Once on that page, press MODE button to confirm and shut off or PAGE button to cancel.

TURN SCREEN BACK ON: Pressing and holding either of these buttons for 3 seconds will turn the screen back on.

Auto Sleep Mode - The screen will automatically go into sleep mode/off if no audio or motion is detected. To wake up the screen, wave hand near unit or press one of the side buttons.
